

# Introducing POSaBIT POS 2.0

POSaBIT Point of Sale (POS) was first introduced in 2018, building on the spectacular success of POSaBIT Payments. Over the last five years, we have introduced new features and improvements that streamlined the day-to-day for retailers from Alaska to Vermont.

Now, we're thrilled to announce the launch of POSaBIT POS 2.0. This release provides all the functionality you know and love, a new modern interface, plus a number of new features and enhancements that are sure to improve the overall budtender and customer experience.

### Refreshed look & feel

Our well-loved interface was in need of an update. After careful discussion with customers, review with user experience experts, and analysis of comparable retail point of sale solutions, we've optimized the look & feel of POSaBIT POS 2.0.

### Budtender-friendly customer education

Training a new budtender or unfamiliar with certain products? The new customer recommendations engine in POSaBIT 2.0 uses machine learning and your own customer records to surface product recommendations to your budtenders.

### Optimize the way you work

From tracking cash denominations in till management, to past purchase behavior, to new filters on the product menu, POSaBIT POS 2.0 has a host of improvements to optimize the way you work.

# What's new in POSaBIT 2.0?

## Refreshed look & feel

The new user interface in POSaBIT 2.0 is based on extensive research on how managers and budtenders actually use the system.

## Till management

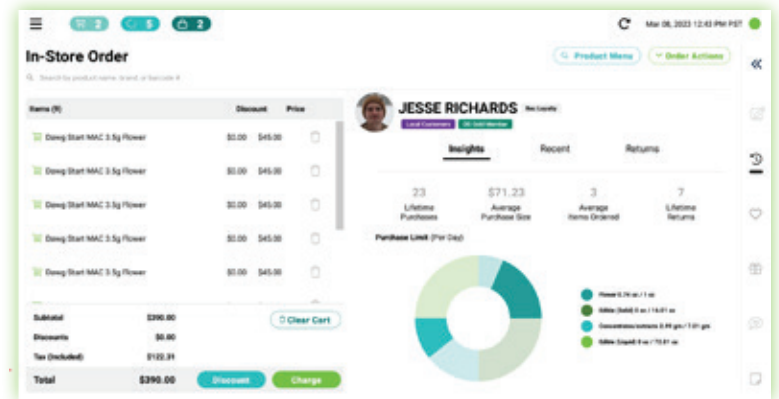

When opening and closing a till, cash denominations can now be recorded for each till from the point of sale.

## Purchase history

Beyond customer purchase history, we now show 'Lifetime Purchases', 'Average Purchase Size', 'Average Items Ordered', 'Lifetime Returns', and even a view of past returns.

## Purchase limits

A new purchase limit meter visually displays how much of each customer's purchase limit they have used – and how much remains.

## Customer preferences

Budtenders will now have access to a customer's product preferences based on past purchase behavior, including type, strain, supplier, brand, and even product effects.

## Customer recommendations

Recommendations help budtenders answer the question "what do you recommend?"

## Product details

New product fields include flavors, effects, and terpenes.

## Enhanced menu filters for product

We have added additional search parameters to filter by THC/CBD potency, terpenes, effects, flavors, and more.

## How do I get started?

All POS terminals will be upgraded to POSaBIT POS 2.0 starting April 26th.

If you are interested in the beta program to preview POSaBIT POS 2.0, email your Customer Success Manager today.
